

Appendix A Technical and Operational Requirements for LMCS

ITU Requirements (25.25-27.5 GHz)

In the ITU Radio Regulations the band 25.25-27.5 GHz is allocated on a coprimary basis to Fixed (FS), Mobile and Inter-Satellite (IS) services. The current ITU regulations applicable to this band for the fixed service are as follows:

2504A (WARC 82) As far as practicable, sites for transmitting stations, in the fixed or mobile service, employing maximum values of equivalent isotropic radiated power (e.i.r.p.) density exceeding 24 dBW in any 1 MHz band in the band 25.25-27.5 GHz should be selected so that the direction of maximum radiation of any antenna will be at least 1.5° away from the geostationary-satellite orbit, taking into account the effect of atmospheric refraction¹.

2504A.1 (WARC 82) The provisions of No. 2504A shall apply until such time as the CCIR has made a recommendation on the e.i.r.p. density limits which should apply in the band.

2505 § 3. (1) The maximum equivalent isotropically radiated power (e.i.r.p.) of a station in the fixed or mobile service shall not exceed +55 dBW.

2608 (4) The power delivered by a transmitter to the antenna of a station in the fixed or mobile service in frequency bands above 10 GHz shall not exceed +10 dBW.

The above regulations were based on the use of these bands by point-to-point systems in the fixed service. Since the band can also be used for high density point-to-multipoint systems, the following measures are needed to comply with the intent of these regulations.

Application of RR 2504A

It should be noted that this Radio Regulation (RR) is under review with a view to ensure protection to Intersatellite Data Relay Satellite (DRS) systems, operating on the geostationary orbit (GSO), and to consider the need to increase the e.i.r.p. of point-to-point FS systems beyond 24 dBW/MHz under rain conditions. There is no specific consideration given at this time to develop separate regulations for LMCS type applications. Based on studies to date², DRS systems are protected as long as the co-channel e.i.r.p. density of 24 dBW/MHz toward specific satellite locations on the GSO is not exceeded. These locations for existing DRS systems are: 174 degrees W, 171 degrees W, 170 degrees W, 160

¹ Input Document to ITU-R JAM WP 7B/9D Doc. 7B43/9D70 "Considerations for Bandsharing Between the Inter-Satellite Service and the Fixed Service Employing Local Multipoint Communications Systems"

23

degrees W, 139 degrees W, 79 degrees W, 62 degrees W, 48 degrees W, 44 degrees W, 41 degrees W, 18 degrees W, 18.4 degrees E, 59 degrees E, 85 degrees E, 90 degrees E, 95 degrees E, 121 degrees E, 153.8 degrees E.

In the case of LMCS, the s.i.r.p density limit of 24 dBW/MHz should be considered as an aggregate of all co-channel transmitters (both hub and subscribers) in a total area visible to a DRS satellite location.

Application of RR 2508

This RR restricts the transmitter power delivered to the antenna of a station in the fixed service to +10 dBW due to the assumption of the use of a high gain antenna in a point-to-point environment. Cases where a single hub transmitter power exceeds 10 watts over a large bandwidth may be permitted, subject to approval by the Department. LMCS operators are encouraged to contact the Department as early as possible if they are planning to use such equipment.

Subscriber transmitter and s.i.r.p power limits

The limits given above also apply to the subscriber transmitters including the need to assess the impact of aggregate interference at the DRS satellite locations. The information available to date for the transmissions from subscriber stations is very limited. Many different scenarios are considered for the transmissions from subscribers depending on the nature of the application. Therefore it will be up to the operator to ensure that their implementations meet the above criteria.

24

Power flux density (pfд) limits for the Inter-satellite service

ITU RR 2578 specifies the pfd limits for the band 25.25-27.5 GHz for emissions from spacecraft in the inter-satellite service. These limits are as follows:

2578 The power flux-density at the Earth's surface produced by emissions from a space station, including emissions from a reflecting satellite, for all conditions and for all methods of modulation, shall not exceed the following values:

- 118 dB(W/m²) in any 1 MHz band for angles of arrival between 0 and 3 degrees above the horizontal plane;
- 115 + 0.5 (4-5) dB(W/m²) in any 1 MHz band for angles of arrival (in degrees) between 5 and 25 degrees above the horizontal plane;
- 105 dB(W/m²) in any 1 MHz band for angles of arrival between 25 and 90 degrees above the horizontal plane.

These limits relate to the power flux-density which would be obtained under assumed free-space propagation conditions. The LMCS operators should consider the above pfd values from inter-satellite systems in their system design.

Coordination Considerations

The following requirements should facilitate inter-system coordination of LMCS systems, and should allow compatibility with inter-satellite applications in the band 25.5-27.5 GHz. These requirements are based on current information available on LMCS technology.

1. Frequency tolerance for LMCS equipment should be 0.001% or better.
2. Minimum spectral efficiency should be 1 bit/sec/Hz.
3. Only orthogonally polarized signals (i.e. horizontal or vertical) should be employed in order to benefit from cross-polar isolation and to maximize frequency re-use.
4. In addition to accounting for aggregate levels, the maximum e.i.r.p density for a single station shall not exceed -52 dBW/Hz, except in cases of hub-to-hub interconnection which will be considered on a case by case basis.

25

5. Inter-system coordination within the same area and with the adjacent areas is the responsibility of the LMCS operators. Industry Canada should be advised of any difficulties.

6. Coordination of LMCS systems in the border area will be required with the terrestrial systems in the U.S. There is no existing coordination agreement with the U.S. at this time for this frequency band. Until such time as an agreement is developed, Industry Canada will coordinate any systems located within 80 km of the border. This distance is currently used for the coordination of fixed systems in the 23 GHz band. LMCS operators are encouraged to provide information to Industry Canada for any coordination carried out with U.S. operators.

The above technical requirements in this appendix are subject to change in accordance with future changes to the ITU Recommendations and radio regulations, as well as any additional information from LMCS operators and equipment manufacturers.

Appendix B Table 1 Service Areas and Fees

Service Area	Number of Households	Block A		Block B	
		/	Fee (\$)	/	Fee (\$)

Appendix B Table 2 Definition of Service Areas

The definition of the service areas was made using Canada Post Corporation's Forward Sortation Areas (FSA) and associated census information. FSAs are the areas represented by the first three characters of the postal code. There are two types of FSA's: urban and rural. Urban FSAs are served by approximately 25 postal walkos. Rural FSAs encompass not more than 199 rural postal offices. Only urban FSAs were considered in the determination of LMCS service areas because the population density of rural FSAs was believed to be too low to render LMCS service economically viable. Their non-inclusion here does not preclude any interested party from applying to provide service in these areas.

Based on the 1991 census information for each FSA, the FSAs were grouped to form service areas. An agglomeration of adjacent FSAs must consist of at least 10 000 households to be considered for an LMCS service area. Two FSAs are considered adjacent if they are separated by less than 8 kilometres.

Graphical representations of the service areas are provided in Appendix E.

Service Area	Forward Sortation Areas
Berri	LAN, LAM
Belleville	K8P, K8R, K8V, K8N
Brandon	R7B, R7C, R7A

Appendix C Release of Information under the Access to Information Act

The questions below are used during any review of information with respect to section 20(1) of the Access to Information Act.

Section 20(1)(a) of the Access to Information Act

1. Is any information considered to be a "trade secret"?
2. If no, in what way is the information a "trade secret"?

For a record to qualify as a trade secret it must meet all of the following requirements:

1. It must consist of information;
2. the information must be secret in an absolute or relative sense, that is, known only by one or a relatively small number of persons;
3. the possessor of the information must demonstrate that they have acted with the intention to treat the information as secret;
4. the information must be capable of industrial or commercial applications; and
5. the possessor must have an interest (e.g. an economic interest) worthy of legal protection.

Information or data not meeting the requirements of a "trade secret" may nevertheless qualify for exemption under other provisions applying to section 20(1).

Section 20(1)(b) of the Access to Information Act

1. Is the information financial, commercial, scientific or technical information?
2. Who provided the information to the department?
3. Has the information been consistently treated as confidential?
4. What measures have been taken to consistently treat the information as confidential?
5. Is any information in the records publicly known or readily available upon request from the third party itself or another source?

Section 20(1)(c) of the Access to Information Act

1. Could the disclosure of information reasonably be expected to result in material financial loss to you?
2. Could the disclosure of the information reasonably be expected to result in material financial gain to someone else?
3. In what way could there be a material financial loss or gain resulting from the disclosure of information?
4. Could the disclosure of information prejudice your competitive position?
5. Describe in what way there could be a prejudice to your competitive position by the disclosure of the information.

36

Section 20(1)(d) of the Access to Information Act

1. Could the disclosure of the information reasonably be expected to interfere with contractual or other negotiations of your firm/company?
2. If so, in what way?
3. Are such contractual or other negotiations now underway or are they clearly expected in the near future?

Appendix D Information Related to Ownership and Control

1. Incorporation documents

- 1.1 The incorporating documents, including any by-laws relating to control matters, for the company and any related holding company.**

2. Shareholdings

- 2.1 The details of the authorized and issued shares for each class of shares for the company and any holding company.**
- 2.2 The details of the rights, privileges, restrictions and conditions of each class of shares for the company and any holding company.**
- 2.3 The details of the beneficial ownership by Canadians (as defined in the Canadian Telecommunications Common Carrier Ownership and Control Regulations), and by non-Canadians, of each class of shares for the company and any holding company.**
- 2.4 The copies of all shareholder agreements for the company and any holding company.**

3. Directors

- 3.1 The name and citizenship of each member of the board of directors of the company and any holding company.**
- 3.2 The details of any agreements or arrangements related to the election of directors of the company and any holding company.**

4. Officers

- 4.1 The name and citizenship of each officer, and office held, of each officer of the company and any holding company.**
- 4.2 The details of any agreements or arrangements related to the appointment of officers of the company and any holding company.**

5. Financing

- 5.1 The complete details of the financial structure of the company and any holding company, including the source of debt and equity financing.**

36

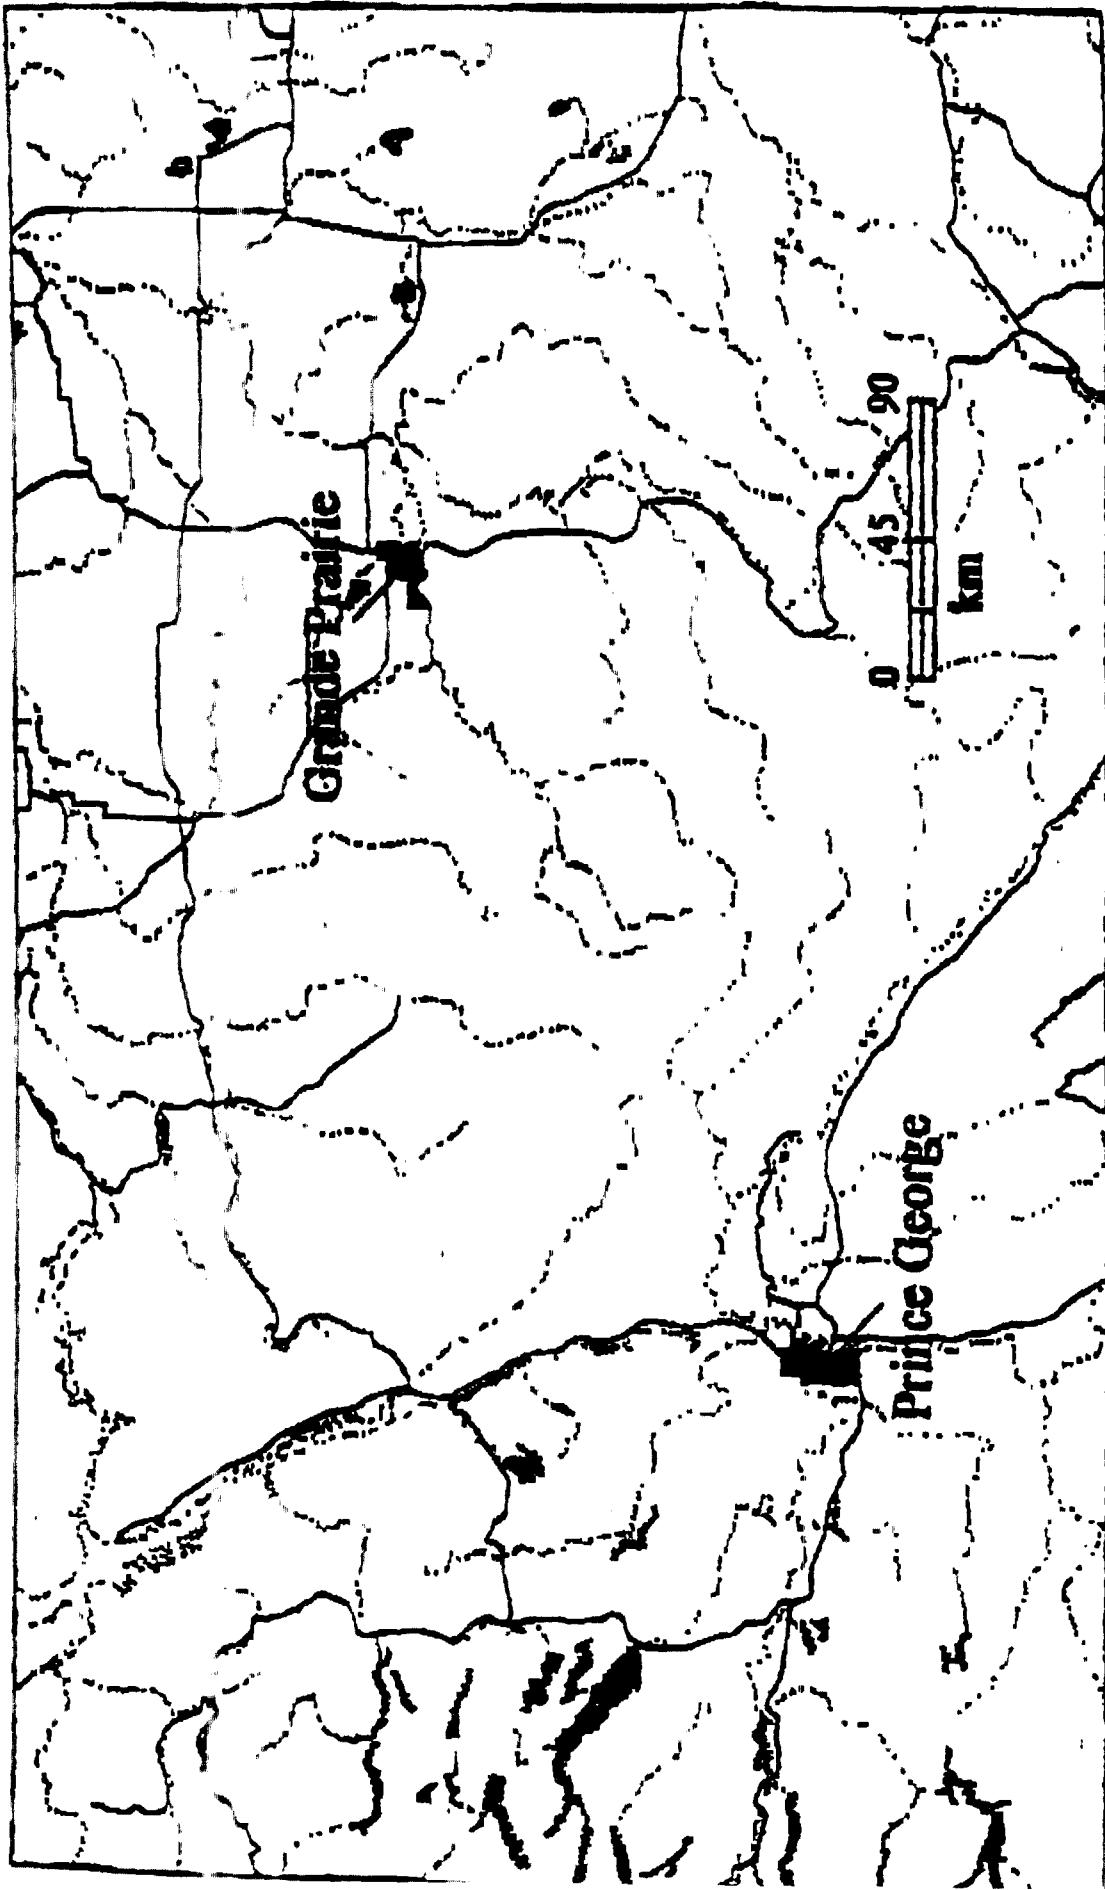

B. Agreements

- B.1 Copies of any agreements between the company and any foreign partner or affiliate.**
- B.2 The details of any other agreement or arrangement which could affect whether the company or any holding company are or are not controlled in fact by Canadians.**
